

NCERT 11.9.1.13Q

EE23BTECH11015 - DHANUSH V NAYAK*

Question: Write the first five terms of each of the sequences in Exercises 11 to 13 and obtain the corresponding series:

$$a_1 = a_2 = 2, \quad a_n = a_{n-1} - 1, \quad n > 2$$

Solution:

Parameter	Description	Value
$x(0)$	First term	2
$x(1)$	Second term	2
ROC	Region of convergence	$\{z : \sum_{n=-\infty}^{\infty} x(n)z^{-n} < \infty\}$
$x(n)$	General term	$x(n) = \begin{cases} ? & ; n \geq 0 \\ 0 & ; n < 0 \end{cases}$

TABLE I
PARAMETER TABLE

Fig. 1. Comparison of Theory and Simulated Values

From the figureFig. 1 we can see that the theoretical and simulated values overlap.

$$x(n) - x(n-1) = 2u(n) - 2u(n-1) - u(n-2) \quad (1)$$

$$X(z) - z^{-1}X(z) = \frac{2}{(1-z^{-1})} - \frac{z^{-2}}{(1-z^{-1})} - \frac{2z^{-1}}{(1-z^{-1})} \quad (2)$$

$$X(z) = \frac{2 - 2z^{-1} - z^{-2}}{(1-z^{-1})^2}, |z| > 1 \quad (3)$$

Using partial fractions

$$X(z) = \frac{2z^{-1}}{(1-z^{-1})} - \frac{z^{-2}}{(1-z^{-1})^2} + 2 \quad (4)$$

Taking inverse Z-transform by result of equation (??) in equation (4):

$$x(n) = 2u(n) + (1-n)u(n-1) \quad (5)$$
